

Explanation on the calculation method of credit grade points

In order to assess the quality of students' learning, the credit grade point system is adopted, and the credit grade point is converted according to the students' examination or examination results. The specific conversion methods of the grade point are as follows:

mark	91-100	90	81-89	80	71-79	70	61-69	60	<60
grade	excellent		good		medium		medium		fail
Grade point	4.1-5.0	4.0	3.1-3.9	3.0	2.1-2.9	2.0	1.1-1.9	1.0	0

Calculation of credit grade points:

(1) credit grade point of a course = academic score of the course × grade point

(2) The calculation formula of average credit grade point is as follows:

$$\text{GPA} = \sum (\text{credits of courses taken} \times \text{grade points}) / \sum (\text{Credits of courses taken})$$
