

广州铁科智控有限公司

Recommendation Letter

26 Mar 2025

As the deputy general manager of Guangzhou Railway Sciences Intelligent Controls Co., Ltd., I was Zheyang's direct supervisor during his internship at our company. Over time, I have witnessed his exceptional learning ability, strong problem-solving ability, high sense of responsibility, and teamwork spirit.

Zheyang started his internship in our company in July 2024. During the internship, he showed strong learning ability and quick adaptability. Despite facing challenging engineering tasks, Zheyang always devoted himself to every job with a positive attitude, showing a diligent and studious spirit. When encountering difficulties, he actively sought guidance from on-site engineers and proposed innovative solutions based on actual conditions. This ability to think independently and solve problems is impressive.

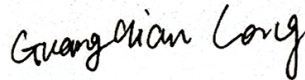

In addition, Zheyang could skillfully combine theoretical knowledge with practice. He not only accumulated rich practical experience through on-site work but also summarised some valuable experience in practice and analysed and optimised solutions from a theoretical perspective. This ability to continuously deepen theoretical understanding and put it into practice at work reflected his theoretical foundation and strong practical ability and also demonstrated his potential in future study and work.

Zheyang's professionalism and teamwork spirit are also commendable. During the project advancement process, he often had active discussions with colleagues from other departments and put forward many constructive opinions, which significantly promoted the smooth progress of the project. At the same time, his attention to detail also impressed me. In some complex work scenarios, Zheyang handled problems patiently and meticulously to ensure that the quality of work reached optimal standards, demonstrating his excellent work attitude and sense of responsibility.

Taken together, I am confident that Zheyang will achieve greater heights in his future academic research and professional development. Therefore, I strongly recommend that he apply for your Master's programme and believe that his joining will positively impact your institution.

Yours faithfully,

Guangqian Long

Deputy General Manager/Senior Engineer
